

# TODO list

- Too low stats: Need to loosen the  $p_T$  cut in the muon. Now in looking at the Muons with only trigger threshold.
- Found unmatching in single-Muon region, need to validate the multiplicity first in the global control region.
- To add samples missed:
  - ttZ, ttW samples
  - Multi-leptons samples: WZto3LNu, ZZto4L
  - Diboson samples: GluGluToContinto2ZtonEmMu
  - Photon contribution (?): DYGto2LG, WGtoLNuG
  - Higgs contribution: THQ, THW

# Relaxed Muon condition

- Global CR selection:
  - Only requires pass the Di-Muon trigger  
**HLT\_Mu17\_TrkIsoVVL\_Mu8\_TrkIsoVVL\_DZ\_Mass3p8**
- Muon selection:
  - Tight Muon:  $|\eta| < 2.4$ , Muon\_tightID
  - Isolated Muon:  $|\eta| < 2.4$ , Muon\_tightID and Muon\_pfRelIso04\_all<0.15
- B-jet selection:
  - $p_T > 30 \text{ GeV}$ ,  $|\eta| < 2.4$ , Jet\_jetId == 6
  - Jet\_btagPNetB > 0.1917

# Muon multiplicity

# b-Jet multiplicity
